

Network Security Laboratory – Lecture 1

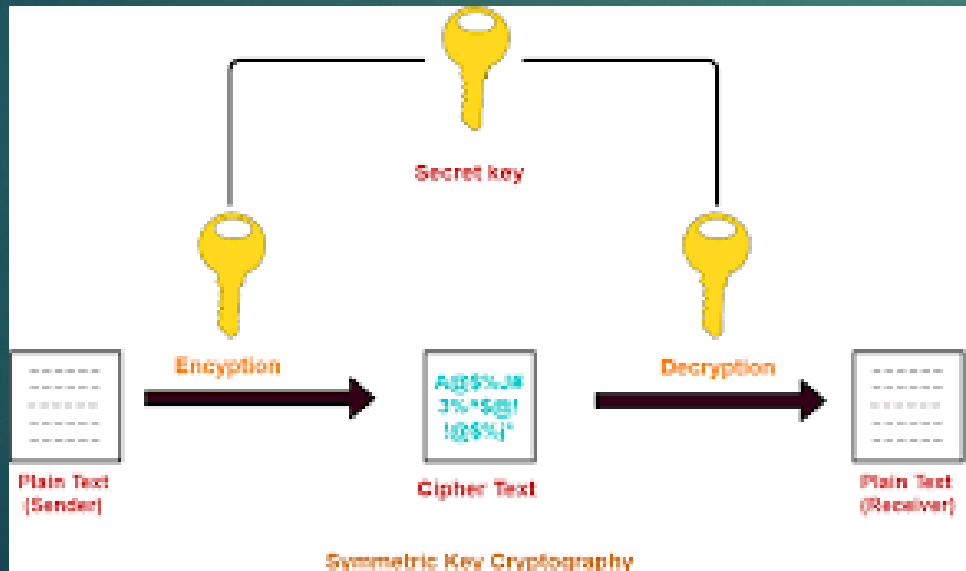

SYMMETRIC CRYPTOGRAPHY & STEGANOGRAPHY

Introducing myself:

- ▶ Developer at NTT Data Italia S.P.A
 - ▶ Former student of Università della Calabria
 - ▶ Master Degree in Computer Science, curriculum Network and Security
 - ▶ My Thesis: AUTOMATIC NETWORK ACTIVITY DISCOVERY
-
- ▶ Office Hours: By Appointment
 - ▶ Email: abaffa94@outlook.it

Symmetric Cryptography

- ▶ Most widely used
- ▶ Based on shared key between hosts
- ▶ Most common symmetric algorithms are: DES, AES, etc...

Netcat

- ▶ CLI Tool
- ▶ Used for reading and writing to network connections
- ▶ We will use to establish a simple stream
- ▶ Analyzing the plain text on Wireshark

- ▶ Useful commands:
 - ▶ Server:
 - ▶ `netcat -l <port>`
 - ▶ Client:
 - ▶ `netcat <hostname> <port>`

OpenSSL Enc

- ▶ Tool for encryption
- ▶ Used to encrypt data from stdin or files
- ▶ We will use it for data encryption and send it on network stream
- ▶ Useful commands:
 - ▶ Encrypt:
 - ▶ `openssl enc -<cipher> -e -k <key> -in <file>`
 - ▶ Decrypt:
 - ▶ `openssl enc -<cypher> -d -k <key> -out <file>`

Cryptocat

- ▶ Download exercise Cryptocat.pdf on course website
- ▶ Run cryptocat.py and see what's going on on wireshark
- ▶ What are the differences between plain text and cypher text on wireshark?
- ▶ Useful commands:
 - ▶ To execute bash command through python use `os.system('your_command')`

Steganography

- ▶ Technique for hide data into images or video
- ▶ The output images contains secret data
- ▶ the hidden file cannot be seen with the naked eye
- ▶ To show it we should decrypt the images

Mutt

- ▶ Is a tool to send email through CLI
- ▶ Using SMTP protocol
- ▶ For configuration go on https://github.com/DeMaCS-UNICAL/NetworkSecurity/tree/master/esercitazioni/Lectures_20-21/Symmetric_Cryptography/steghide
- ▶ Download installAndConfigure_msmtplib.txt and msmtplib_config.txt
- ▶ Configure msmtplib to send email with mutt
- ▶ Useful Commands:
 - ▶ Send email: `mutt [-s subject] [-a attachment, use -- at end of attachments] receiver_address`

Steghide

- ▶ Download exercise Steghide.pdf on course website
- ▶ Run steghide.py and see what's going on on wireshark
- ▶ Useful commands:
 - ▶ Encryption:
 - ▶ `steghide embed -cf <source> -ef <data_to_encrypt> -sf <output_file> [-k key]`
 - ▶ Decryption:
 - ▶ `steghide extract -sf <image_with_encrypted_data>`

Questions?

The lesson is over.

Thank you!
